

Alesta® Super Durable

Architectural polyester products with proven durability and extended guarantee.

Architects design prestigious buildings which have to last for many years and respect the surrounding areas. They look for reliable materials with outstanding properties and respect for the environment.

The Alesta® Super Durable range of products is based on a super durable polyester resin system, higher grade pigments and stabilisers with outstanding exterior durability. It's highly suitable for very sunny environments.

End users have quickly recognised these benefits, which directly affect the service life of the coated product.

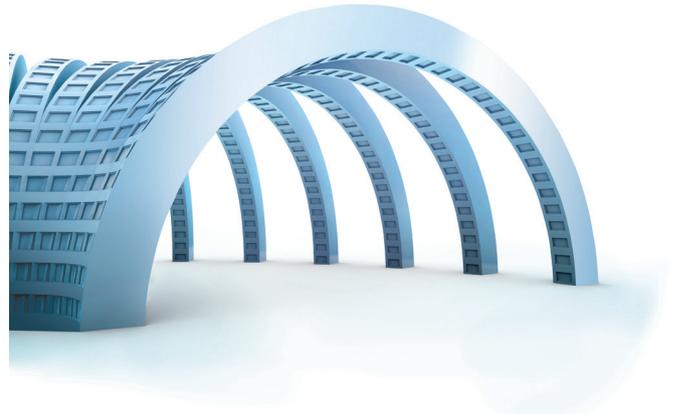

Targeted applications are doors, window frames, cladding and other parts in architecture and construction of prestigious buildings. Also intended for urban furniture, shopping centers, garden furniture, lighting and other general industrial applications where the gloss retention and colour fastness are very important.

Alesta® SD products can be formulated in a variety of appearances and in a large number of colours following the latest trends.

The new Axalta collection promotes mat, semi gloss, metallic, high gloss, textured surfaces and special effects, at the service of durable architecture. It offers a palette of colours with inspiration from raw materials, water, air, earth and fire, seasons and climates, which respect the landscape of the new century.

Prestigious architects all over Europe and the Middle East have worked with Axalta for the creation of "The Architects Edition" promoting this range.

Alesta® SD is part of our Premium range which is formulated in architectural polyester quality according to the most severe specifications. It is approved by Qualicoat Class 2 and GSB Master . The technical benefits of the Alesta® SD range have been validated by many different process development engineers and jobcoaters.

Highlights

- Outstanding durability
- Can be formulated in all types of finishes
